## Alerts

Name	Risk Level	Number of Instances
<a href="#">Content Security Policy (CSP) Header Not Set</a>	Medium	27
<a href="#">Application Error Disclosure</a>	Low	1
<a href="#">Cookie No HttpOnly Flag</a>	Low	3
<a href="#">Server Leaks Version Information via "Server" HTTP Response Header Field</a>	Low	29
<a href="#">X-Content-Type-Options Header Missing</a>	Low	1
<a href="#">User Agent Fuzzer</a>	Informational	120

## Alert Detail

Medium	Content Security Policy (CSP) Header Not Set
Description	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

<b>Low</b>	<b>Application Error Disclosure</b>
Description	This page contains an error/warning message that may disclose sensitive information like the location of the file that produced the unhandled exception. This information can be used to launch further attacks against the web application. The alert could be a false positive if the error message is found inside a documentation page.
URL	<a href="http://46.101.250.219:5000/register">http://46.101.250.219:5000/register</a>
Method	POST
Attack	
Evidence	HTTP/1.1 500 Internal Server Error
Instances	1
Solution	Review the source code of this page. Implement custom error pages. Consider implementing a mechanism to provide a unique error reference/identifier to the client (browser) while logging the details on the server side and not exposing them to the user.

Plugin Id	<a href="#">90022</a>
<b>Low</b>	<b>Cookie No HttpOnly Flag</b>
Description	A cookie has been set without the HttpOnly flag, which means that the cookie can be accessed by JavaScript. If a malicious script can be run on this page then the cookie will be accessible and can be transmitted to another site. If this is a session cookie then session hijacking may be possible.
URL	<a href="http://46.101.250.219:5000/login">http://46.101.250.219:5000/login</a>
Method	GET

<b>Low</b>	<b>X-Content-Type-Options Header Missing</b>
Description	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.
URL	<a href="http://46.101.250.219:5000/static/style.css">http://46.101.250.219:5000/static/style.css</a>
Method	GET
Attack	
Evidence	
Instances	1
	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages.

Solution	If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing.
